

# Infusion™ MicroBubble Therapy

We believe these billions of tiny bubbles will change millions of lives and reinvent an industry!

Infusion™ MicroBubble Therapy is a calming experience that offers many added benefits to your bathing experience. Infusion™ MicroBubble Therapy is a process of infusing the pressurized water with billions of micro sized, oxygen rich bubbles. These bubbles whirl around your body to help you rest and unwind. Feel your muscles release built up tension as billions of tiny bubbles burst to help clean and hydrate your skin. Sit back and relax as your bath will transform into a soothing cloud of tiny bubbles that help to moisturize, soften, restore and exfoliate your skin.

## What is Infusion™ MicroBubble Therapy?

Infusion™ MicroBubble Therapy uses a U.S. patented liquid thin film device to saturate the water with up to 50% more dissolved oxygen than regular water alone. These MicroBubbles clean out all of the dirt and waste products in your skin. There are no cleansing chemicals involved so it is a safe and soothing experience.

This process will moisturize your skin making it feel silky and smooth right out of the bath. The stimulation of the epidermal layer of your skin can also promote restfulness and the release of muscle tension. Our partner NuWhirl, sponsored a third-party laboratory to conduct an experiment on the effects of MicroBubble Therapy. Test results showed that 100% of test participants had improved hydration and moisture content in the upper layer of skin just after 10 minutes of MicroBubble Therapy. That is a 14.24% increase over untreated skin. Also 79% of test participants had an average of 10% improvement of softness in their skin.

The effects of MicroBubble Therapy will stay with you even when the experience is over.

### MicroBubble Features & Benefits:

- Small (10-50 microns) billions of bubbles that float and reach the entire body surface
- Makes and keeps body warm
- Sterilizing Effect
- Psychological Benefits
- Exfoliates skin
- Moisturizes and softens skin
- Easy to operate: controlled by an air switch
- Stimulate collagen production
- Deeper Cleansing of the pores to reduce impurities
