

Sample Care and Instructions

- Towels which contain soap or detergent, or fabric softener residue may appear to have scorch marks; however, this is simply discoloration of the residue in the towels themselves. The unit does not reach a temperature sufficient to scorch towels.
- Some heated towel racks are constructed from 304 stainless steel. They are extremely durable. To maintain their appearance, follow these simple care instructions:
 - For routine cleaning, simply switch off the unit, allow to cool to room temperature, wipe with a damp cloth and buff with a soft, dry cloth.
 - Light scratches and blemishes may be removed by polishing the unit. Unit should be switched off and allowed to cool before polishing with a commercially available metal polish.
 - Under no circumstances should abrasive cleaners be used to clean the unit.

Towel Placement

When hanging a towel on a heated towel rack, it is recommended that the towel be folded lengthwise, and then draped over the top bar with half of the towel on either side of the unit.

Hanging towels with multiple folded layers improves insulation, helping the towel absorb and retain heat. The greater the surface area of the towel touching the bars the better— this decreases time needed to dry a towel.
