

MAINTENANCE

ACRYLIC (DEEPER SCRATCHES)

Maintenance

- For slightly deeper scratches, sand the spot with a wet sandpaper before polishing.
- Depth of abrasion or scratch will determine grade of sandpaper required:
 - **Slight to moderate damage** – Grade 600, 800, then 1200 sandpaper
 - **Deeper damage** – Grade 400, 600, 800, then 1200 sandpaper
- When sanding, start with lowest grade sandpaper (e.g. 400), working your way up as you sand a slightly larger area with each new grade. Finish with polishing putty.

ACRYLIC ULTRA VELOUR MATTE FINISH (Available on specific models)

- Clean the acrylic with a cloth and a mild non-abrasive soap.
- For stubborn stains, use isopropyl alcohol (rubbing alcohol), and rinse at the water.
- For encrusted stains such as grease, oils, cosmetics, or marks left by rubbing with another object, use a "Magic Eraser" type cleaning sponge and rinse with water.
- To restore the original satin finish after intensive scrubbing, sand the rubbed portion in small circular movements with grade 220 sandpaper, and finish with the brown 3M Scotch-Brite™ pad # 7447, available at hardware stores. Do the same for surface scratches, or for any stain that could not be removed with a cleaning sponge.
- For the use of any product other than those mentioned in this document, first make a test on a small, less visible surface before completely cleaning the bathtub.
- If in doubt, please contact our technical service.

SYSTEM

• Technical information

- The automatic drying cycle activates a programmable time from 5 to 60 minutes after each use to ensure perfect hygiene of the air channels.
- It is normal to hear the turbine working at a certain time of day. This means that the drying cycle has been programmed.

Maintenance

- **BainUltra® recommends to start the drying cycle everytime the bath is used as a shower or just to soak. In the case this procedure was not followed, here are the instructions for cleaning the air channel.**

It is recommended to perform the following cleaning steps **every four (4) months**.

- Add water up to 5 cm above the level of the jet holes.
- Incorporate 4 liters of Clorox bleach (4%) to reach a 2500 ppm concentration.
- Leave to soak for 5 minutes (For a concentration of 1000 ppm, the duration is 10 min).
- Start the jets
- Drain the bath
- Rinse the bath using the hand showers

MAINTENANCE

AKASA® comfort cushion and pillow (Technogel)

- Clean with water only.
- Any cleaner / soap may affect the aesthetic and adhesive characteristics of the product.

ARMREST & METALLIC FEET PLATED OR PAINTED

- In most cases, a little soapy water or mild detergent (dishwashing) is sufficient.
- For stubborn stains, a mixture of water and vinegar or isopropyl alcohol can be used.
- For encrusted stains such as grease, oils, cosmetics, or marks left by rubbing with another object, use a cleaning sponge of the "Magic Eraser®" type, and rinse with water.
- As a preventive measure, it is suggested to apply a protective wax such as "faucet wax + MD" on exposed surfaces.
- Any cleaning products other than those described above could degrade the surface finish. We advise you to carry out a test on a less visible portion before attempting to clean the soiled area.

QUARTZ DECK

- In most cases, a little soapy water or mild detergent (dishwashing) is sufficient.
- For stubborn stains, a mixture of water and vinegar or isopropyl alcohol can be used. The main manufacturers of quartz panels recommend the use of specialized liquid cleaning products such as "Method Daily Granite" or "Bar Keepers Friend", available in most large-scale hardware stores.
 - Residues stuck on the surface such as food, gum, or nail polish can be removed by scraping with a flexible plastic spatula, and any marks left by the blade can be easily removed with one of the solutions described above.
 - Rinse with cold water to remove residue, and your surface will look like new.
 - Any cleaning products other than those described above could degrade the surface finish. We advise you to carry out a test on a less visible portion before attempting to clean the soiled area.

NOTE: • BainUltra cannot be held responsible for any damaged surface following the use of a cleaning product other than those recommended listed above.
